Bird Vita-Bands

The Nutrient Treated Plant Bands

Contain roots to transplant stage, avoid transplant shock, get earlier maturity. Bands are nutrient saturated to prevent nitrogen depletion of soil.

Bird Vita-Band "10"

Contains roots from 8 to 10 weeks on annuals, perennials and vegetable plants. Easily removed at transplant time.

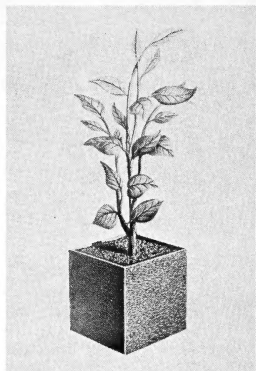

Bird Vita-Band "H"

Heavier band designed for longer growing periods — up to 40 weeks. Special coating on outside seals microscopic holes which roots would otherwise find. Band is easily removed at transplant time.

Bird Vita-Band "D"

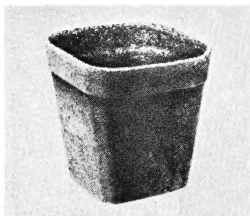

Contains growth until you let roots through band. At time of transplanting simply crack band to allow root penetration. Band then quickly disintegrates.

Bird Vita-Bands are available in eight sizes: $1\frac{1}{2} \times 2\frac{1}{2}$; $1\frac{3}{4} \times 1\frac{3}{4} \times 2\frac{1}{2}$; $2 \times 2 \times 2\frac{1}{2}$; $2 \times 2 \times 3$; $2\frac{1}{2} \times 2\frac{1}{2} \times 3$; $3 \times 3 \times 3$; $4 \times 4 \times 3$; $4 \times 4 \times 4$.

Square or Round Bird Peat Pots

Choose from either square or round designs. Pots are designed for quick root penetration during initial growth. After transplanting, pot disintegrates rapidly to encourage continued fast growth. Drainage hole in bottom provides adequate moisture control. Top rim design assures aeration around every pot even when spaced close together. For annuals, bedding plants, vegetable plants — especially when you perform transplanting operation. Full size range, both square and round.

Bird Gro-Tainer®

Made from durable fibre, Bird Gro-Tainer Flats help you grow and sell plants in volume. Flange at top provides extra strength, easier handling. Holes in bottom allow for drainage. Three sizes — No. 2: $7\frac{3}{8}'' \times 5\frac{1}{2}'' \times 2\frac{1}{2}''$; No. 3: $8\frac{1}{2}'' \times 6\frac{1}{8}'' \times 2\frac{1}{2}''$; No. 4: $9\frac{3}{8}'' \times 7\frac{3}{8}'' \times 2\frac{1}{2}''$.

Bird Perennial Pots

Strong, lightweight, inexpensive, Bird Perennial Pots add 3 to 5 months to your selling season. They come completely assembled, with solid stapled bottom. Hard coating inside and out adds to their durability. Openings in bottom allow for drainage. For all types of perennials, bulbs, shrubs. Four sizes — $5''$, $5\frac{1}{2}''$, $6\frac{1}{2}''$, $9\frac{1}{2}''$ heights.

TERMS OF SALE. Our regular terms are CASH WITH ORDER. Remittance by Bank Check, Post Office or Express Money Order is safest. Register letters containing money. Please do not ask for C.O.D. shipment unless you enclose 25% of the amount of the order. In conformity with other responsible seedsmen, Comstock, Ferre & Co. warrants to the extent of the purchase price that seeds, bulbs or plants sold are as described on the container within recognized tolerances. Seller gives no other further warranty, express or implied.

SPECIAL QUOTATIONS. Prices, particularly of Field Seeds, depend upon market conditions and are subject to change without notice. We will quote large quantities at prices as low as the highest quality of seed will permit. Let us quote you current prices on Grass and Field Seeds, Seed Potatoes and Onion Sets.

SEED TREATMENT. The treatment of seeds before planting is good insurance against loss and poor stands due to unfavorable weather and soil conditions. The so called failure of seeds to germinate is more often due to outside influences than any fault in the seeds themselves. The most effective materials we have found for seed treatment for good general use are Spergon and Phygon. These are particularly effective on Beans, Beet, Corn, Spinach and Squash and beneficial to a lesser degree on many other seeds. It is important that the right amount of the right material be used or germination may be retarded.

We recommend that our customers use these materials only with the most recent instructions of manufacturers and Experiment Station authorities. Upon request we can furnish seed on bulk orders treated as required at a slight advance in price, but we do not guarantee or hold ourselves responsible for results.

MAIL ORDERS. In the shipping season we endeavor to give prompt service on orders, and give special attention to seeds needed for immediate planting. During the rush season some delay is inevitable as we are called upon to supply an ever increasing number of orders in spite of being hampered by uncertain and slow delivery of our seed supplies. Early orders are advisable, particularly for seed to be sown in greenhouses and cold frames for growing early plants. Very early orders for general garden planting may have to be held for economical handling until crops of seed are received and packaged.

CONNECTICUT SALES AND USE TAX. Residents of Connecticut are liable for and we must collect a tax of 3% upon a few items, such as Plant Labels, Twines, Paper Pots and feed for pets, such as Dog Feed and Bird Feeds.

BEFORE MAILING YOUR ORDER. Write your name, address and shipping point in full and plainly on the order sheet. Be sure to give nearest freight or express station if different from your post office address.

We will gladly send copies of this catalogue to any of your friends who may be interested.

Early Snowball, select strain

CAULIFLOWER

Cauliflower is easy to grow if properly cared for, although to be a profitable market crop it is somewhat particular as to soil and location. For the early crop it should be planted in a greenhouse or hot bed in March and transplanted as soon as weather will permit. Sow in May and transplant 18 inches apart for the late crop. Cultivate thoroughly and frequently to keep plants in good growing condition. When heads begin to form it may be necessary to bunch the leaves together and tie loosely to protect them from the sun.

CELERY

For both market and home use there is no more highly esteemed vegetable than Celery. As the seed is small it requires careful planting. Sow in drills one-fourth inch deep in early Spring. The soil should be well pulverized and the seed lightly covered with soil pressed firmly over it. Additional sowings may be made but usually the early plantings germinate best. Transplant in rows 3 feet apart, leaving 5 to 4 inches between plants, or for extra large stalks 6 to 8 inches. Keep well cultivated and as cool weather approaches draw the soil up around the plants. Continue until only the tops of the plants remain uncovered. Blanching of early Celery is often accomplished with boards or building paper set against the rows instead of soil. Late Celery should be pitted or placed in cellars before freezing weather.

GOLDEN PLUME A large blight-resisting variety with solid hearts and heavy stalks. Blanches easily to a bright golden yellow color.

GOLDEN SELF BLANCHING Large heavy hearts of solid yellow stalks. Early, easily blanched and of good quality.

FLOWER SEEDS OF SUPERIOR QUALITY

Marigold, Petite

5190

We have combined annual, biennial, and perennial varieties listing them alphabetically. Each is identified by a symbol: (A) for annual, (P) for perennial, and (B) for biennial. The symbol is followed by the average number of seeds per ounce.

Annuals are flowers that bloom the first year from seed. Biennials bloom the second year after planting from seed and usually do not live for a third year. Perennials usually flower the second year after planting from seed and ordinarily bloom for several years, some for many years.

The best results with many annuals may be had by sowing them directly in beds where they are to flower. The hardier varieties such as Calendula, Larkspur, Bachelor Button, and Poppy may be sown very early, while the more tender Balsam, Nasturtium, Marigold, and Zinnia should be planted later when the ground is warm.

Perennials should be sown in June to get best results. They should be transplanted in the late Summer or Fall.

Fordhook Bush Lima 242

BEANS

Dwarf or Bush Lima

Limas are less hardy than other beans and should not be planted until the ground is thoroughly warm. They require more space than string or shell beans to produce a good crop. Plant in rows 3 feet apart, placing 2 or 3 beans 15 inches apart and covering not more than 1 inch.

FORDHOOK BUSH LIMA Produces a heavy crop of uniformly large, meaty, green beans, with thick heavy pods in clusters. Our strain is high in yield and reliable for large well-filled pods.

FORDHOOK BUSH LIMA 242 A new heavy yielding strain that bears a prolific crop even under adverse conditions. Pods are of good size and uniformly carry 3 to 4 thick beans of choice quality.

BURPEE'S IMPROVED BUSH LIMA Strong vine with pods 5 to 6 inches long, filled with thick green beans of largest size.

Pole or Running Beans

Pole beans, although they require the support of strong poles or a trellis, amply repay this extra attention. It is a mistake to plant closer than 3 or 4 feet apart or to allow more than 2 or 3 beans to grow to a pole. With well enriched soil they outyield the dwarf varieties and produce over a much longer season.

EARLY LEVIATHAN LIMA Productive early variety, about a week earlier than other large pole limas. Pods contain 4 to 5 good sized beans.

KING OF THE GARDEN LIMA Improved strain, extra large pods filled with enormous beans. Most popular main crop pole lima.

WORCESTER OR KING HORTICULTURAL Large pods similar to French's Dwarf Horticultural. We have the true large-seeded high colored strain.

KENTUCKY WONDER Early and enormously productive green podded snap bean. Pods long, round, meaty and of fine quality. Produces over a long season.

Tendergreen — A Delicious Green Bean

BEANS

Beans are tender and should not be planted until danger from frost is past. Sow in drills 2 inches deep and 2½ to 3 feet apart at intervals from May to August. A larger yield will be obtained if plants are thinned to 3 inches apart. Cultivate freely but not when the vines are wet.

We recommend thorough dusting with Rotenone Dust as an efficient control for Mexican Bean Beetle. Apply every two weeks after beetles appear.

HYBRID SWEET CORN

Cross Pollinated Yellow Varieties

Special methods of breeding and crossing have produced many new varieties of exceptional merit. The crop from carefully grown seed show a remarkable increase in vigor and yield as well as greater uniformity in ripening. The varieties listed below have been chosen for outstanding performance. We caution our customers against saving their own seed for planting, as hybrid corn will not give the best results unless carefully crossed every year by expert growers.

Chemically treated seed helps germination in cold wet soil and prevents damage by insects and disease. We use the most improved materials. On the most used varieties we can supply seed sorted into flat and thick kernels. The flat kernels are more uniform size and are recommended for use in corn planters, while the thicker kernels are equally good for smaller plantings.

SIZED FLATS 4¢ PER LB. PREMIUM.

SWEET CORN

Sweet Corn is tender and will not stand frost, nor will it germinate well in wet cold soils. It responds to good soil and clean, frequent shallow cultivation. Plant in well fertilized hills 3 feet apart each way, putting 5 or 6 kernels in each hill and covering to a depth of not more than 1½ inches. When 6 inches high remove all but the 3 most vigorous stalks from each hill. For a succession throughout the season plant several varieties early in May, including first early to late varieties. A good main crop variety planted at intervals of two weeks until the middle of July will produce a continuous supply. Treatment with Spergon is very effective in insuring the germination, especially for early plantings, and controls seed borne diseases.

Hybrid White Varieties

To meet the demand for white corns of equal or better quality than the popular yellow hybrids we are listing two of the most outstanding white hybrids. These have been thoroughly tested in our trial grounds. For the home garden they are unexcelled in quality, and will be useful to please the highest quality market trade.

TOKAY SUGAR 80 days* A most unusual hybrid producing a bushy plant with 3 to 5 ears. These are medium size, 6 to 7 inches long, with 8 to 12 rows of sweet and delicious pure white kernels. The flavor is outstandingly fine and sweet, surpassing the best of the yellow hybrids.

WHITE CROSS BANTAM 90 days* Whitekerneled counterpart of the popular Golden Cross Bantam. Large creamy ears 8 inches long with 14 to 16 rows of small tender kernels. An outstanding large-eared corn, a good yielder, dependable and sure to please.

FIELD AND ENSILAGE CORNS ARE LISTED ON PAGE 45.

PEAS

Peas should be sown as early as possible in order to mature before the hot summer weather. To secure an extra early crop the smooth seeded varieties may be sown just as soon as the ground can be worked. The wrinkled varieties are not quite as hardy and should be planted a little later. Sow 2 or 3 inches deep in single or double rows 3 to 4 feet apart. The tall growing sorts require brush or other support. This is not so necessary for the dwarf varieties but they are greatly benefited if kept off the ground. Inoculation of the seed before planting with Nodogen increases the crop and enriches the soil.

It is of easy culture and by successional sowing a supply may be secured throughout the season. For early spring use sow late in September and protect with hay or straw through the winter. May be sown in spring as early as the ground can be worked, either in rows or broadcast. Summer sowings should be on freshly plowed ground and the soil must be packed hard about the seed, as it will not germinate in dry soil.

TOMATO

To furnish desirable early plants the seed should be sown in February or March in a hotbed or box kept in a warm place. When the plants are about 2 inches high they should be thinned or transplanted to ensure stocky plants. As soon as danger from frost is past transplant to the open ground, setting about 3 feet apart each way. They should be frequently cultivated and well-fertilized. The fruit will ripen earlier and be improved in quality if the vines are pruned to two stems and trained to stakes or trellises. Plants for late summer crop may be started from seed in May.

ASTORIA BENT Fine leaved dark green, forms an extra fine turf with other grasses. May be mowed closely.

HIGHLAND BENT Very fine leaved, creeping habit, grows well alone or mixed with other grasses. Permanent on medium and extra dry soils.

CHEWING'S FESCUE New Zealand strain with fine dark green leaves forming a close and lasting turf. Thrives on dry sandy soils, withstands partial shade, and does well under all ordinary conditions.

CREeping RED FESCUE Fine leaved strain that spreads from roots, making a dense turf. Especially valuable in shade and does well in dry sandy soils.

ILLAHEE RED FESCUE Improved strain which withstands heavy wear. Fine leaved, creeps vigorously and recovers from drought quickly. Forms a thick turf that crowds out weeds.

ALTA TALL FESCUE Strong growing forage grass with broad leaves. Does well on poor soil and makes excellent pasture. Coarse, but relished by stock.

KENTUCKY BLUEGRASS One of the best permanent lawn grasses. Vigorous, fine-leaved and dark green. Best used in mixtures, as it requires three years to become fully established.

MERION KENTUCKY BLUEGRASS Dense dark green strain resistant to heat and drought, adapted to producing extremely fine bluegrass lawns; usually mixed with fescue and bent, it withstands cutting and makes a fine green lawn all summer. Seed is small, plant one-half as much as Kentucky Bluegrass.

RED TOP Dependable fine-leaved hay grass. Also used in lawn mixtures to form a quick turf of good quality.

TIMOTHY The common hay grass. Produces a heavy crop on nearly all soils.

ANNUAL RYEGRASS (Common) Quick growing grass used as a nurse grass in lawn grass mixtures and becoming widely used as a cover crop planted in August or September and ploughed under in the spring.

PERENNIAL RYE GRASS Not as strong growing as the common rye grass, but ordinarily persists for several years. For lawns and pastures.

ORCHARD GRASS Tall vigorous pasture grass, especially adapted to moist and shaded places.

BROME GRASS, LINCOLN This is the only strain suitable for producing a good crop in our climate. One of the most palatable feeding grasses, it produces a very heavy crop on well drained land.

REED CANARY GRASS A coarse tall growing grass producing an extremely heavy crop on soils too wet for ordinary grasses. Useful for pasture or cut for green feed.

ALFALFA

Alfalfa excels all other green crops in yield, feeding value, resistance to drought and soil improvement. The varieties we offer are highly recommended for hardiness and disease resistance.

Insure thrifty stands on clover and alfalfa mixtures with the new Simplex Nodogen (Alfalfa and all types of Clover combined in one package)

ATLANTIC Variegated, a high yielder introduced by the New Jersey Agricultural Experiment Station for eastern plantings.

BUFFALO, Certified Resistant to bacterial wilt disease. Recovers rapidly after cutting and makes a large fall growth.

RANGER Variegated, very resistant to bacterial wilt, equal to Grimm in cold resistance.

VERNAL New strain resistant to disease, produces an enormous crop, recovers quickly after cutting.

CLOVERS

ALSIKE Strong spreading clover, longer lived than Medium Red on either dry or poorly drained soils. Should be used in all hay and many pasture mixtures.

KENLAND RED Strong growing strain, resistant to anthracnose, outproduces the ordinary medium red clover and frequently lives longer.

MEDIUM RED Northern grown seed adapted to the New England climate. Most widely used clover.

LADINO Best white clover for improved pastures. Makes double the growth of other dwarf white clovers and quickly recovers from pasturing. One pound per acre is sufficient with other grasses.

WHITE DUTCH Low, spreading variety for pastures and lawns. Forms a mat of creeping stems and grows throughout the season. For lawns on dry banks and on poor soil we recommend sowing at least 1 lb. to each 5000 sq. ft. in addition to the lawn grass mixture. For pastures 5 lbs. per acre is ample.

WHITE SWEET Tall-growing biennial variety. Thrives on all but very acid soils. Valuable for pasturage and soil improvement.

CRIMSON An annual variety much used as a cover crop, often sown in the spring as it is not entirely certain to winter over in New England.

BIRDSFOOT TREFOIL Deep rooted perennial clover-like plant that endures drought and does well under a variety of soil conditions. On low fertility acid soils too poor to grow clover it produces forage of high feeding value.

All legumes should be inoculated to insure strong growth and good crops, particularly Alfalfa and new plantings of clovers. **NODOGEN FOR CLOVERS AND ALFALFA.**
